

EVIDENCED-BASED PROOF:(MRI &/or X-Ray plus Lab data demonstrating irrefutable scientific comp corroborations of real therapeutic clinical regenerative – restorations)!

FYI: Dr. Dauer is an acclaimed world leader in the disruptive space of endogenous(Internally self-generated) healing stem cells. All of the stem cell production is via neuro-Macro to Micro-molecular technology APPS with all clinical successes arising from within a natural and super holistic medicine paradigm.

TO BE NOTED: Medical research scientists (Richard Sarnat,MD& others) are “astounded”etc. by what clinical advances have been achieved particularly through Dr. Dauer type-employment of real-time weighted-algorithmic clinical case-troubleshooting- testing-assessments.

Accordingly we have simply employed holistic yet very specific personalized –precision-medicine -APPS with every patient in need of advanced synergistic-foundational neuro-physiological therapeutics! Then too, and not uncommonly, many patients are actively

searching for some kind of answer to their previously advancing elusive affliction(s)! Moreover, treating doctors have reportedly related to me that,“Certain aspects of your work is not being done anywhere else on the planet”.TO WIT;Exhibit#1: “Your quick clinical results with terminal pulmonary disease cases are absolutely incredible”.Exhibit #2: “Patient kidney transplant cases now have no need for surgery after your holistic- type treatments”.Exhibit#3: Recently 22 year-old bodybuilder patient was presenting “as a last resort”,mostly with severe residuals caused by trauma (5 bone fractures plus a motorcycle helmet fracture caused from-cement-to-curb-double-impact).The concussive damage to the CNS(both Brain AND Spinal Cord) was the worst major residual,refractive to all previous care.Patient was initially depressed, both with severe pain and disability topped off with episodes of suicidal ideation (including threat of actually doing it!);“If your holistic work can not get me better”! Yet fortunately, at discharge, he felt he was “95% better”! Thus, NO PAIN with plenty of GAIN:(AND NO OPIOIDS NEEDED)!

NOTE: generally analogously sports-injury related: Moderate Sprains (fixed-up in one week); If severe injury (with/or w/o fractures)usually 3 to 4 weeks!(typical of Dr.Dauer holistic injury-work) Thus,perhaps not surprisingly, research doctors& others have labeled these therapeutic clinical results as “Astounding” and even termed them as a “Miraculous- Breakthrough- Phenomena” of “huge clinical significance”..... [due to CNS (Brain AND Spinal Cord) integrative AND neuro-generative emphasis]: “Your treatment protocols seem to be readily and universally adaptable to almost any malady and at any stage of severity”!!

Yet, however spectacular past clinical COST-EFFECTIVE treatmentresults have been, individual results can and will vary. Thus we don’t claim and/or promise any future “cure” for any patient. We are only a clinical facilitator attempting to get the body to work right! In the end,It Is the BodyItself ,Working Right ,That Does All the REAL HEALING !

NOTE:To better elucidate actual past clinical case details of anticipated general &/or specifics....& for both possible & real patient benefits:

#### FULL STORY

A study led by Indiana University School of Medicine researchers demonstrates how electroacupuncture triggers a neurological mechanism that can help promote tissue repair and relieve injury-induced pain.

Their findings, published online March 16 in the journal *Stem Cells*, provide the most comprehensive picture yet of how electroacupuncture stimulates the brain to facilitate the release of stem cells and adds new insight relating to the cells' healing properties.

Electroacupuncture is a form of acupuncture that uses a small electrical current to augment the ancient Chinese medical practice of inserting fine needles into the skin at pre-determined points throughout the body.

For the study, a team of more than 40 scientists at institutions in the United States and South Korea was led by four senior authors including IU School of Medicine's Maria B. Grant, MD, Marilyn Glick Professor of Ophthalmology and co-corresponding author; Mervin C. Yoder, MD, IU Distinguished Professor, Richard and Pauline Klingler Professor of Pediatrics, associate dean for entrepreneurial research at IU School of Medicine, director of the Herman B Wells Center for Pediatric Research and co-corresponding author; and Fletcher A. White, PhD, Vergil K. Stoelting Chair of Anesthesia, professor of anesthesia, pharmacology and toxicology.

"This work is a classic example of the power of team science, where investigators in different institutions with specific expertise worked together to unravel the complexity of how electroacupuncture works to help the body respond to stressors," said Dr. Yoder.
